Continuation Sheet (PTO-303)

Continuation of 2. NOTE: the use of the phrases, "in need thereof", "therapeutically phagocytosis or ICAM-1 decreasing", "soybean milk containing soybean trypsin inhibitor" raises new issues.

Continuation of 5. does NOT place the application in condition for allowance because: the declaration is noted but in Limtrakul they obviously administered the soybean milk to the mice and further in Kosaka they clearly administer a composition of soybean milk to humans for medicinal purposes, thus the argument is moot and the declaration is thus questionable on its face. Applicant also argues tha Kosaka teaches papain is in the composition but applicants claims do not exclude other ingredients besides soybean milk. In terms of the comments concerning JP 62-36304 it is noted that applicants have admitted that the soybean milk was processed for consumption thus it is not a problem for humans to consume and thus it is still a viable reference. Further, the composition is clearly topically applied to the skin. Applicants comments concerning 09/110,409 are not understood since Eisinger is a named inventor in this application thus it still is rejection using a reference by "another". Applicant finally says that Limtrakul does not teach application on skin but the abstract of Limtrakul is explicit in saying that they studied the effect of soybean milk on mouse skin..
